JAVASCRIPT

REACTJS

- Backend Skills

My SQL Community

FireBase

Mongo DB

- Design UI/UX Skills

Figma

Wix

- Full Stack Development

MERN Stack

- Cross Platform Development

React Native

Projects

- **Resturant Management System**

I build this project during my summer training at Viva Security Solutions. RMS ("Resturant Management System") is a full stack web application for managing the day to day work process of a particular restuarant. For example managing and adding the staff, food stock

management,etc. For building this project,I use Java using Netbeans version 7 for frontend developement and My SQL Community for the backend services

- **College Insights Application**

Me and my team build this project in final year of diploma. We build a cross platform mobile application for both Android and iOS using react native framework and Google firebase. Our main motive behind building this is to reduce the paper work or offline process of our college and make it online, more faster, easy to understand with a simple UI so that user can interact and use this application in a very easy manner.

- **Todo App**

A very small and basics build to understand the state and props concept using react js. A todo app application generally use to manage and add the daily task of our day in a very easy manner.

- **YouTube Clone**

This project build to understand the working of API connectivity. In this project I use reactjs, material Ui kit, axios and Google youtube api services. Axios is used for fetching the data from youtube api and this project provide the functionality of searching the video, playing the video in high quality, have video playlist to play the next video.

- **Portfolio Website**

A portfolio website is a unique way to showcase your work and let others know about yourself. It's like an evergreen platform for your projects, case studies, and information about you. In addition, it's one of the best ways to express your personality, experience, and capabilities. I build project using reactjs.
